Math 10460 - Honors Mathematics II
Homework 6 - Due Monday, February 29

Correct any problems you lost points in on the exam. Identify what went wrong, and give a correct solution. Do not do these corrections directly on the exam, but on a separate sheet(s) of paper. Submit this, paper clipped to your exam.

This assignment will be out of 100 points, and you will receive points according to the percentage of missed points you correct. For example, let's say you lost 20 points overall on the exam. If you do corrections that would earn you back 18 of the 20 lost points, your homework score will be $\frac{18}{20} \cdot 100 = 90$.
